

High Resolution Agarose is an intermediate melting point agarose that efficiently separates small DNA and RNA fragments between 20 and 800 bp in length and yields ultra high resolution with high clarity and low background.

Recommended applications: analysis of AFLP's (Amplified Fragment Length Polymorphisms), STR's (Short Tandem Repeats) and tetranucleotide repeats; recovery of nucleic acids, analytical and preparative electrophoresis of DNA and RNA of 20 to 800 bp in length.

CERTIFICATE OF ANALYSIS

Product Name: **High Resolution Agarose** (CAS NO: 39346-81-1)

Cat. No. E0302-50

Grade: Molecular biology grade

Batch No.: 16120601

Report date: 04 June, 2012

TEST	SPECIFICATION	RESULTS
